FiNAC Gem & Jewellery
Management Software

FiNAC Gem and Jewellery Management System

HARDWORKING
SOFTWARE.

The FiNAC Gem and Jewellery Management system is distinctive.
We created it that way.

It is an exceptional Datamation Gem and Jewellery Management system, developed with a focus to add value to your business. Our commitment to the gem and jewellery industry is an outcome of our extensive understanding of all processes and practical day-to-day software requirements.

Software must be custom-made and ship shaped for businesses to excel uninterrupted. With our wealth and knowledge of experience, we will ensure that your software works hard for you. For over three decades we have continuously developed modules for a variety of sectors including the gem and jewellery industry.

It is time to explore Datamation's FiNAC Gem and Jewellery Management system, created for the gem and jewellery industry. Take control.

Features

FiNAC Jewellery, Stones, Watches and Accessory Management system is a comprehensive ERP, that covers the entire process of purchasing raw stones , cutting, polishing and fixing. They can also handle sale of all other items including warranty maintenance using serial numbers. The raw stones can be cut and polished through sub contractors and the sub contractors can be monitored until they return the finished goods.

The process of purchasing can involve several partners and the stones can be purchased in carats and sold in pieces. Thereafter each partner can claim his share. In the case of watches and accessories the serial number is used to track all sales. The sale can be done through multiple outlets, in different locations and even different countries, all connected to a single server. The CEO can check the profitability of each sale, available stock, location wise performance etc on a hourly basis. The system comes with full integration to Financials.
